

Introducing Stack & Pack:

A new stackable bottle designed to better meet your needs and the needs of your customers.

Suitable for all kinds of non-carbonated liquid products – especially sensitive products – Stack & Pack bottles are highly practical and functional and require absolutely no cardboard sheets in between layers on a pallet. A sophisticated base design with a deeper-than-usual concave indentation enables simple and efficient stacking, compact and organized assembly of products and a significant reduction in faulty products.

What's more, as Stack & Pack bottles fully optimize the use of storage space, you can now fit even more bottles on a pallet. Overall, these bottles make handling, transport, storage and shelving all extremely easy and efficient. Not to mention, with more bottles on a pallet and less packaging materials necessary, you can generate significant annual savings.

Get more flexibility with the Stack & Pack family

The easy-to-grab, easy-to-pour Stack & Pack bottles with fastly secured caps come in half- and full liter sizes in transparent and light barrier PET. These bottles are also available in packs of 6 for optimal handling and convenience.

Key benefits:

- No cardboard waste
- Stable stacking of significantly more bottles on a pallet
- Less human intervention due to no cardboard removal when shelving the products
- High quality bottles
- Made from PET – 100% recyclable material
- High branding potential due to bottle shape and surface area
- Easy, space-saving storage and attractive POS displays
- Less damaged goods thanks to safe, secure loads
